

USER MANUAL

It is a multi user finance tracking program.

The Program will store the incomes and expenses of multiple users in a database.

The program uses Link list, Dynamic Memory Allocation, Structures, Functions, Arrays, Pointers, Loops, Switch Cases etc

The user can access or basically track his/her finances by this program. The user sees his/her incomes and expenses along with the category, date and with the amount.

There is also a GOAL feature in which the user gets a message if the goal is failed and also if the goal is being achieved.

Password or lock system is also included in the program in order to access any user's wallet and to change the "current" password.

In order to see the income and expenses the user needs to follow below steps-:

- 1) Press 1 if the user's profile is "User 1", 2 if "User 2", and 3 if "User 3".
If the user wants to delete then press 4 and 5 to terminate the program.
- 2) The user should now enter the correct password for that user profile.
- 3) Now after that he/she can access his/her wallets list.
- 4) After choosing any wallet, the program now asks the user to enter any number in order to display income and expenses along with net balance, net expense and the GOAL.
- 5) Go back to the main screen option is also there in the program.

THANK YOU
